

NeoSpark '2.0 — Event Website

A single-page landing site for **NeoSpark '2.0**, the annual technical and creative symposium hosted by the Department of Computer Science and Applications (CSA), Jeppiaar College of Arts and Science.

Theme: "**Spark the new. Shape the future.**"

Overview

This is a static HTML page with an animated, circuit/spark-themed dark UI. It introduces the fest, lists the competition tracks, credits associated partner communities, and provides a contact section — all in one scrolling page with smooth-scroll navigation.

Features

- **Animated hero section** with a glitch-text title, typewriter-style tagline, and a canvas-based particle network background (auto-disabled for users with `prefers-reduced-motion`)
- **Fixed glassmorphism navbar** with smooth-scroll links and a mobile hamburger toggle
- **Scroll-reveal animations** via `IntersectionObserver` for section entrances
- **About section** describing the fest
- **Tracks section** split into:
 - **Individual events:** Idea Ignite, Vision Vault, Type Titan, Frame Fusion
 - **Team events:** Blaze Battle, Enigma Quest, Glam Glide, Hack the Exit
- **Partners section** crediting associated tech collectives: Twistor Bot and Tech Warriors
- **Footer/contact section** with an email link and college credit
- Fully responsive layout, no external JS frameworks

Tech Stack

- **HTML5** — single file, no build step required
- **CSS3** — custom properties (CSS variables) for theming, animations, and a responsive grid/flex layout
- **Vanilla JavaScript** — mobile nav toggle, scroll-reveal via `IntersectionObserver`, and a `<canvas>` particle animation
- **Google Fonts** — Space Grotesk, Chakra Petch, JetBrains Mono

File Structure

```
.
├── index.html      # Full site (markup, styles, and scripts in one file)
├── logo.jpg        # College logo (referenced, not bundled – add your own)
└── README.md
```

Note: The page references a local image, `logo.jpg`, for the college badge in the hero section. Make sure this file sits alongside `index.html`, or update the `src` attribute to point to the correct path.

Getting Started

No build tools or dependencies needed.

1. Clone or download this repository.
2. Make sure `logo.jpg` is present in the same folder as `index.html`.
3. Open `index.html` directly in a browser, or serve it locally:

```
bash  
  
python3 -m http.server 8000
```

Then visit `http://localhost:8000`.

Deployment

Since it's a static file, you can host it on any static hosting provider, for example:

- GitHub Pages
- Netlify
- Vercel
- Any standard web server (Apache/Nginx)

Just upload `index.html` and `logo.jpg`.

Customization

Key things you may want to update:

What	Where
Colors / theme	CSS custom properties in the <code>:root</code> block (<code>--bg-deep</code> , <code>--violet</code> , <code>--mint</code> , <code>--spark</code> , etc.)
Registration links	<code>href</code> values on the "Register Now" buttons under <code>#tracks</code> (Google Forms)
Rule book link	"Rule Book" button in the hero section (Google Drive link)
Contact email	<code>mailto:</code> link in the footer
Event names	<code><ul class="event-list"></code> items under Individual/Group track cards
Partner details	<code>.partner-card</code> blocks under <code>#partners</code>

External Links Used

- Rule Book (Google Drive)
- Individual event registration (Google Form)
- Team event registration (Google Form)
